Pressure sensors

Device features

- Long-term stability
- Immune to interference
- Rugged design
- Reliable

SensoControl® sensors feature long-term stability, interference immunity, a sturdy high-quality construction and a wide range of variants.

The sensors are designed and manufactured in our own production facilities under established standards for the industrial instrumentation and control systems. This allows us to easily adapt them to customer requirements or to critical applications.

We carefully consider the special requirements for automation and mobile hydraulics during the design phase. So our **SensoControl®** sensors are ideally suitable for the permanent series use in industrial and mobile applications.

Pressure sensors

The housing and all parts of the pressure sensors that touch the substances are manufactured from stainless steel. This provides a large range of media tolerability. A wide range of applications is possible due to the combination of high interference immunity and high resistance to external influences (shock, vibration and temperature).

The application areas are varied: form process engineering test rigs, conveying and lifting equipment, mobile hydraulics, general machine construction, pneumatic construction and hydraulic plant construction.

The SCP should be used when the pressure needs to be monitored reliably for long periods.

In this case the optimal sensor type can be selected from different product series according to the needs of the application. Different connecting plugs, output signals and connection threads are also available.

SCP03 pressure sensor

Device features

- Monolithic design
  - No internal seal
  - No material mix
  - No weld seam
- High media compatibility
- Measuring range from -1 to 1000 bar / -14.5 to 14,504 psi
- Negative pressure resistant
- Many connections

The SCP03 is a pressure sensor for liquid and gaseous media.

The digitally calibrated piezoresistive measuring cell detects negative pressures from -1 bar up to high pressures of 1000 bar.

The pressure connection in contact with the medium has a monolithic design. This eliminates the need for internal seals and weld seams. A mix of materials is avoided.

The resulting low permeability in combination with the stainless steel results in broad media resistance.

The compact stainless-steel housing allows space-saving use, even in harsh environmental conditions. With its wide range of pressure ranges, output signals and connectors, the SCP03 can be used in industrial and mobile applications.

The packaging variant optimized for OEM's is environmentally friendly, cost-optimized and facilitates handling.

Typical application range

- Mobile hydraulics
- Transport vehicles
- Conveyor vehicles
- Commercial vehicles
- Automotive technology
- Brake systems
- Oil pressure
- Test equipment and technology
- Gearbox control

SCP04 pressure sensor

Device features

- Monolithic design
  - No internal seal
  - No material mix
  - No weld seam
- EC79/2009 approved (up to 600 bar)
- High media compatibility (hydrogen)
- Up to 1000 bar (up to 14,504 psi)
- Negative pressure resistant
- Special connections

The SCP04 pressure sensor is desgined to meet the chemical and physical requirements of hydrogen applications.

The digitally calibrated piezoresistive stainless steel measuring cell detects pressures up to 1000 bar. The connection to the sensing elements is made via a special bonding and thus remains stable even at low temperatures, shocks or vibrations.

The measuring cell and the pressure connection in contact with the medium are made in one piece. This eliminates the need for internal seals and weld seams. A mix of materials is avoided. The construction was designed to prevent embrittlement of the metal surface by ionized hydrogen.

The monolithic design eliminiates leakage due to material fatigue at internal seals. The SCP04 has no pressure transfer fluid, no large pressurized areas, and is vacuum-tight and elastomer-free.

The resulting low permeability in combination with the stainless steel results in a wide media resistance. The process connections have been designed to be gasket-free for hydrogen applications.

The compact stainless steel housing allows space-saving use, even under harsh environmental conditions.

Typical application range

- Hydrogen applications

Pressure sensor SCP08 for presses

Device features

- 250 / 400 / 600 / 1000 bar
  (3,626 / 5,802 / 8,702 / 14,504 psi)
- G1/4“
- 0-10V / 4...20mA 2-wire
- M12x1 / DIN
- Reinforced internal design
- Persistance against shock & vibration
- Made for high pressure acceleration
- High dynamic signal

Particularly in die-casting applications the controlling for the piston requires a high dynamic pressure sensor. During this fast, high energetic process the components are stressed by shock, vibration and pressure acceleration.

The pressure sensor SCP08 measures the pressure via a special designed measurement cell and has a high adapted overload pressure to withstand the pressure peaks.

To avoid abrasion of the cell due to Diesel or similar effects, the process connection is protected by an adjusted drilling. The dimension of the drilling still guaranties an instantaneous pressure response.

To increase shock and vibration resistance, the relevant internal components are covered and reinforced. The speed of the sensor influences directly the quality of the production process.

The unique combination of accuracy, durability and high dynamic response makes the SCP08 ideal for the requirements of die-casting applications.

Typical applications

- Press construction
- Die-casting

Pressure sensor SCP08

Pressure sensor SCP09

Device features

- Measuring range
  - from 0-10 bar to 0-600 bar (0-145 psi to 0-8700 psi)
- Wide range of
  - Ports
  - Connectors
  - Electrical outputs
- Stainless steel design
- Hermetic port
- Storage and operating media temperature
  - -40 to 125°C
- Operating ambient temp. range
  - -40 to 100°C
- Snubber option
- REACH/RoHS/CE/UKCA

The SCP09 pressure sensor is the ideal solution for customers with challenging measuring requirements for general industrial applications in the mid and high pressure ranges. The SCP09 features a wide range of ports, connectors, and analog electrical outputs for ease of integration in various industrial applications.

The SCP09‘s high quality stainless steel design features a hermetic port with no internal O-ring seals making it compatible with most media and suitable for harsh environments. With extreme shock and vibration capabilities, a wide operating temperature range, and high proof and burst pressures; the SCP09 is ideal for industrial applications including injection molding, CO2, HVAC systems, and other hydraulic or pneumatic applications.

For dampening of pressure spikes due to hammer and caviatation a optional damping (Snubber) can be provided.

Typical applications

- Hydraulics and Pneumatics
- Mobile Hydraulics and Off-Highway Vehicles
- Pumps and Compressors
- Air Conditioning and Refrigeration Systems
- Plant Engineering and Automation

Pressure transmitter SCP10

Device features

- ATEX
  - II 1G Ex ia IIC T4 Ga
  - II 2G Ex ia IIC T4 Gb
  - II 1G Ex ia IIB T4 Ga
- Monolithic design
  - No internal seal
  - No material mix
  - No weld seam
- High media compatibility
- Up to 1000 bar
- Negative pressure resistant

The intrinsically safe pressure sensor SCP10 has been specially developed for use with liquid and gaseous media in hazardous areas. It fulfills the requirements for conditions in:

Zone 0: II 1G Ex ia IIC T4 Ga

II 1G Ex ia IIB T4 Ga

Zone 1: II 2G Ex ia IIC T4 Gb

This sensor ensures maximum safety in critical environments.

The digitally calibrated piezoresistive stainless steel measuring cell detects pressures from 4 bar up to 1000 bar. The connection to the sensing elements is made via a special bonding and therefore remains stable even at low temperatures, shocks or vibrations.

The measuring cell and the pressure connection in contact with the medium are made from a single piece. This eliminates the need for internal seals and weld seams. A mix of materials is avoided.

Due to the monolithic design, leaks caused by material fatigue at joints are excluded by design.

The SCP10 has no pressure transmission fluid, no large pressurized surfaces and is absolutely vacuum-tight and elastomer-free.

The resulting low permeability in combination with the stainless steel results in broad media resistance.

The compact stainless steel housing enables space-saving use, even in harsh environmental conditions.

With the wide range of pressure ranges, output signals and connectors, the SCP10 can be used in industrial and mobile applications.

Pressure transmitter SCP11

Device features

- ATEX
  - II 1G Ex ia IIC T4 Ga
  - II 2G Ex ia IIC T4 Gb
- Monolithic design
  - No internal seal
  - No material mix
  - No weld seam
- EC79/2009 (up to 600 bar)
- High media compatibility (hydrogen)
- Up to 1000 bar
- Negative pressure resistant
- Special connections

The intrinsically safe SCP11 pressure sensor is designed to meet the chemical and physical requirements of hydrogen applic ations. It fulfills the requirements for conditions in:

Zone 0: II 1G Ex ia IIC T4 Ga

Zone 1: II 2G Ex ia IIC T4 Gb

This sensor ensures maximum safety in critical environments.

The digitally calibrated piezoresistive stainless steel measuring cell detects pressures from 4 bar up to 1000 bar. The connection to the sensing elements is made via a special bonding and thus remains stable even at low temperatures, shocks or vibrations.

The measuring cell and the pressure connection in contact with the medium are made in one piece. This eliminates the need for internal seals and weld seams. A mix of materials is avoided. The construction was designed to prevent embrittlement of the metal surface by ionized hydrogen.

The monolithic design eliminates leakage due to material fatigue at internal seals.

The SCP11 has no pressure transfer fluid, no large pressurized areas, and is vacuum-tight and elastomer-free.

The resulting low permeability in combination with the stainless steel results in a wide media resistance. Specifically for hydrogen applications, a seal-free process connection has been implemented.

The compact stainless steel housing allows space-saving use, even under harsh environmental conditions.

SCPSi pressure switch

Device features

- Pressure sensor / -switch
- Temperature measurement
- Industry 4.0-ready
- IO-Link 1.1
- Smart Sensor Profile 2nd edition
- Plug & Play
- Compact
- Optimized design
- Adjustable via IO-Link
- Readable via IO-Link
- Useable as IO-Link sensor or switch
- Monolithic pressure cell

The fully electronic pressure switch SCPSi is adjustable and free from susceptible mechanical and moving components.

With its digital interface and smart functions, the SCPSi iis future-proof for the increasing demands of automation solutions.

The 2 switching outputs are individually and safely parameterized from the machine control system via the standardized digital IO-Link interface (IEC 61131-9). This replaces manual programming and the commissioning phase is considerably shortened. Devices can be replaced during operation without the need for reparameterization. In order to react promptly to machine status changes or process adjustments, the re-parameterization is carried out during operation.

As an alternative to the switching functions, diagnostic values, process data and status messages are recorded directly via IO-Link and enable subsequent more complex analyses. Via the integrated temperature measurement of the pressure measuring cell, the media or ambient temperature is recorded.

IO-Link replaces time-consuming manual programming and eliminates the need for a sensitive key display with the manufacturer-dependent setting menu. This more compact, more resistant design without key display, in combination with the smart functions & setting options, opens up new possibilities in machine design for the machine designer, with considerable savings potential.

The compact stainless steel housing allows space-saving use, even in harsh environments.

The proven stainless steel measuring cell with the wide pressure range (from -1 up to 600 bar) allows a wide range of applications for liquid and gaseous media. The media-contacting pressure connection with the pressure measuring cell is monolithically manufactured from a stainless steel without welds and sets new standards in media compatibility and pressure resistance.

The packaging variant optimized for OEM‘s is environmentally friendly, cost-optimized and facilitates handling.

Application examples

- **Injection-mould machines**
- **Tool-making machines**
- **Power packs**
- **Special machine construction**
- **Replacement for mechanical pressure switches**

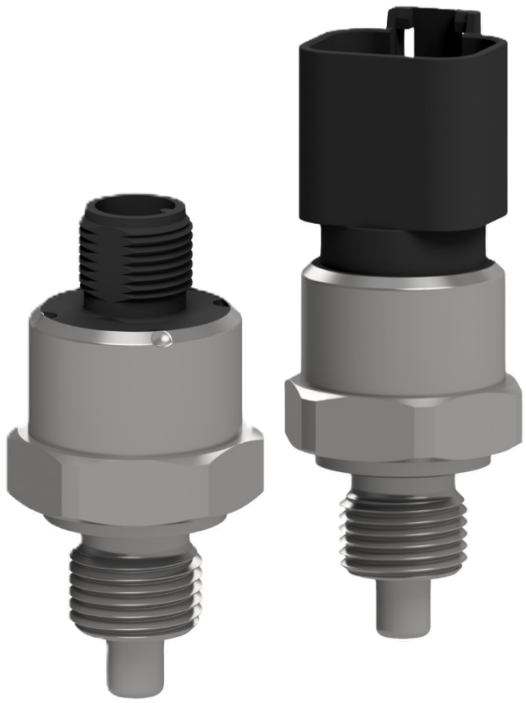
SCT03 temperature sensor

Device features

- Temperature sensor
- Wide temperature range
  - -50 ... +150°C
- Easy integration
  - Electrical outputs
  - Process connections
  - Electrical connectors
- High pressure resistance
  - Design
  - Robust
  - Compact
- Broad media compatibility
  - Stainless steel process connection
  - Liquids & gases



The SCT03 temperature sensor is engineered for the thermal and mechanical demands of mobile and industrial applications. It covers media temperatures from -50 to +150 °C and ambient conditions from -40 to +125 °C. With the high system pressure capability and IP67 ingress protection (mated), it is ready for harsh environments.

Industry-standard output signals and common connector/port options simplify integration.

Stainless-steel process connections enable broad media compatibility with liquids and gases.

The compact, robust metal housing makes the SCT03 well-suited for demanding applications such as mobile hydraulics.

Application examples

- **Industrial hydraulics**
- **Mobile hydraulics**
- **Thermal management**

Volumetric flow rate sensors

Device features

- Different measurement techniques
  - Quick
  - Not dependent on viscosity
  - Without loss
- Many measurement ranges
- Analogue output signal
- M12 connecting plug
- 24 VDC

The flow sensors used in **SensoControl®** provide accurate volume flow information in hydraulic systems (e.g. in testing equipment).

The sensors deliver a output signal that is proportional to the volumetric flow rate for further processing to an electronic system. They are compatible with conventional, well-known standards.

- M12 connecting plug
- 24 VDC
- 0/4 to 20 mA

The volumetric flow rate can be easily displayed when using the **SCE-020** panel meter.

In order to meet the many different application requirements, three different measuring principles are available:

- **SCVF** geared counter
- **SCFT** turbine
- **SCQ** spring/piston

The volumetric flow rate sensors are used in control, regulation or monitoring systems where analogue signals are needed to capture the volume flow.

Volumetric flow rate sensors

Overview

	SCQ	SCFT	SCVF
			Range of use	For quick flow changes Measures in both directions	Low loss measuring of volume flow	Measures different substances Measures lower volume flows (leakage measurements)
	■ Response speed ≤ 2 ms ■ Reverse operation ■ Wide viscosity range ■ Compact size ■ Up to 420 bar (6092 psi)	■ Response speed ≤ 50 ms ■ Many measurement ranges ■ Low flow resistance ■ Up to 800 l/min ■ Up to 420 bar (6092 psi)	■ Very wide measurement range ■ Not dependent on viscosity ■ Up to 400 bar (5802 psi)
Applications	■ Test rigs ■ General machine construction ■ Hydraulic plant construction		Order code	SCQ-xxx-10-07	SCFT-xxx-22-07	SCVF-xxx-10-07

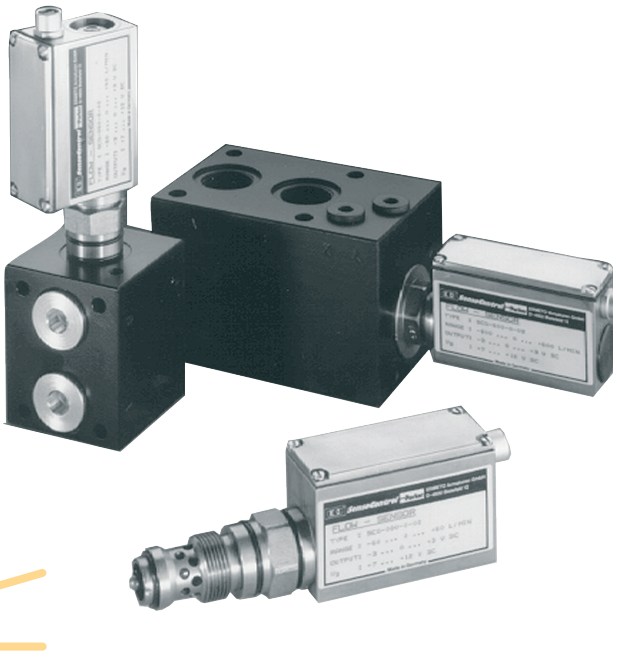
Overview

	SCVOT2
	
Range of use	Vortex flow and temperature sensor for Water/glycol
	■ High accuracy ■ Up to 16 bar ■ No moving parts ■ energy-efficient low pressure loss
Applications	■ Thermal Management, Datacenter (CDU)
Order code	SCVOT2-xxx- **30 –07**
Refer to page	60-64

SCQ flow meter

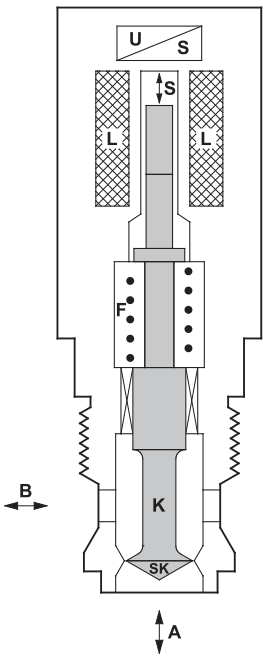
Device features

- Measurement principle Spring/piston principle
- Response time ≤ 2 ms
- Measurement in both directions
- Wide viscosity range
- Compact design
- Withstands pressures up to 420 bar (6092 psi)



Function

The piston (K) is moved due to a flow from A to B or from B to A. In the idle state, the spring (F) and the piston (K) are in equilibrium. The delta (S) is proportional to the flow and is converted to a value through the built-in electronics. Through the change in direction of the piston (B to A), the flow direction can be indicated. (e.g. -45.8 l/min) The reaction time of the piston movement is less than 2 ms.



SCQ measurement principle

Application

When working with high-pressure hydraulics, it is very important to be able to quickly detect the flow rate.

Installation with a connection block permits the combined measurement of p, T and Q. Rapid assembly of the **SCQ**s is achieved with an in-line adaptor for tube or hose installation. Use under extreme conditions (such as high load changes or rapid pressure increases) is possible because of the sturdy construction.

The **SCQ** is the perfect solution when recording highly dynamic volume flow changes. Rapid load changes, which can cause damage for example in valves and pumps, can be safely detected. Due to its unique measurement process, the **SCQ** can capture volume flow in both directions.

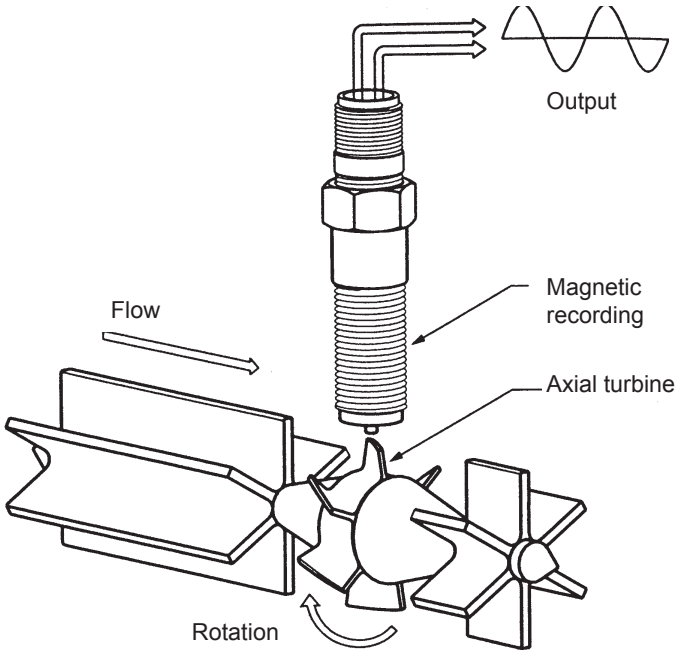
SCFT measurement turbine

Device features

- Measurement principle: Turbine
- Response speed ≤ 50 ms
- Measurement range from 1 to 800 l/min
- Low flow resistance
- Suitable for reverse operation
- Built-in pressure and temperature ports



Function

The turbine wheel is driven by the oil flow. The generated frequencies are processed through the digital electronics and influences from the disturbing flow effects are compensated for. Because of the low flow resistance Q_R, the hydraulic circuit operates with very low losses.

Reverse operation is also possible because of the special vane (winged) design - so the turbine can be operated in both directions.

The turbine is fitted with an EMA-3 screw coupling for measuring pressure. Oil temperature can measured directly in the oil flow of the turbine by connecting the temperature sensor (**SCT-150**). This provides all important measurements at the installation location.

Application

The **SCFT** is the ideal solution if the volumetric flow rate needs to be recorded loss-free across a wide flow range (up to 800 l/min.).

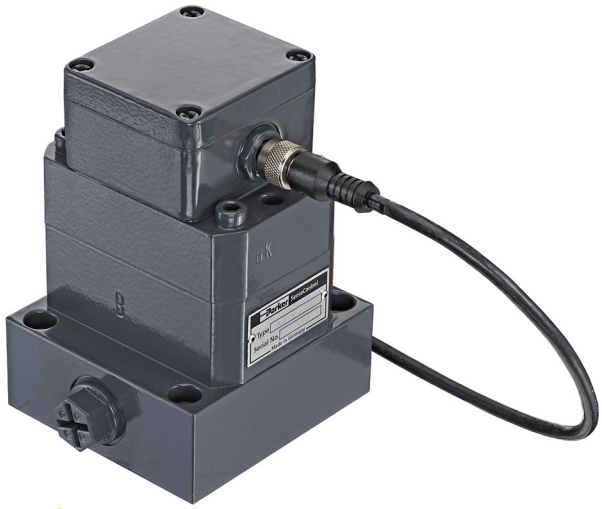
SCVF volume counter

Device features

- Measurement principle: Volume/geared counter
- Eight measurement ranges from 0.01 - 2 to 1 - 300 l/min
- Accuracy ± 0.5 % FS
- Withstands pressures up to 400 bar (5802 psi)
- High viscosity range
- Low noise
- Exact flow rate measurement over a wide viscosity range
- Versatile usage for different substances



Gear counter for highly accurate flow rate measurements in hydraulic systems

Function

The SCVF geared counter functions as a volume flow meter. A very precisely crafted pair of geared wheels is driven by the fluid flow.

The SCVF works over a wide viscosity range. Different seals permit usage in many different applications.

Applications

Due to the wide viscosity range, any liquid can be measured that can be pumped and has a certain degree of lubricating capability.

- Brake fluid (EPDM seal)
- Skydrol
- Mineral oils
- Hydraulic oil and
- Grease

The SCVF is the ideal solution when carrying out precise flow rate measurements over a wide viscosity range.

SCVOT2 flow sensor

Device features

- Flow measurement of:
  - Water / Purified water
  - Coolants
  - Water-glycol mixture
- Several ports available
  - DN6 … DN25
  - G1/2", G3/4", G1", G1 ¼"
- 0.5 … 150 l/min
- Accuracy
  - up to +/- 1 % FS
- Vortex principle
- Light Housing
  - Glasfiber PPS
- IP65
- 4…20mA
- Temperature measurement
  - PT1000

Product description

The flow sensor SCVOT2, based on the vortex principle, offers a wear-free and highly robust design without any mechanical moving parts, ensuring long-term durability and minimal maintenance.

It is specifically designed for the measurement of water and water-glycol mixtures with viscosities up to 15 cSt, making it ideal for a wide range of thermal management applications. The sensor's media-resistant construction and ability to withstand high system pressures up to 16 bar—as well as pressure shockwaves up to 100 bar (water hammer)—ensure reliable and accurate volume flow measurements even under demanding industrial conditions.

Its low pressure loss contributes to energy-efficient system operation, while high temperature resistance allows precise measurement up to 125°C.

Integrated temperature sensing further enhances compatibility and monitoring capabilities.

The SCVOT2 allow easy adaptation to different system configurations and ensures suitability for systems of varying sizes. The wear-free design reduces downtime and extends service life, providing consistent, maintenance-free operation.

Together, these features make the SCVOT2 a durable, reliable, and efficient solution for thermal management in industrial environments. As a result, it is commonly used in Coolant Distribution Units (CDUs) and In-Rack CDUs to optimize cooling performance and energy efficiency.

Applications

- Coolant Distribution Units
- Industrial cooling systems

Mounting conditions

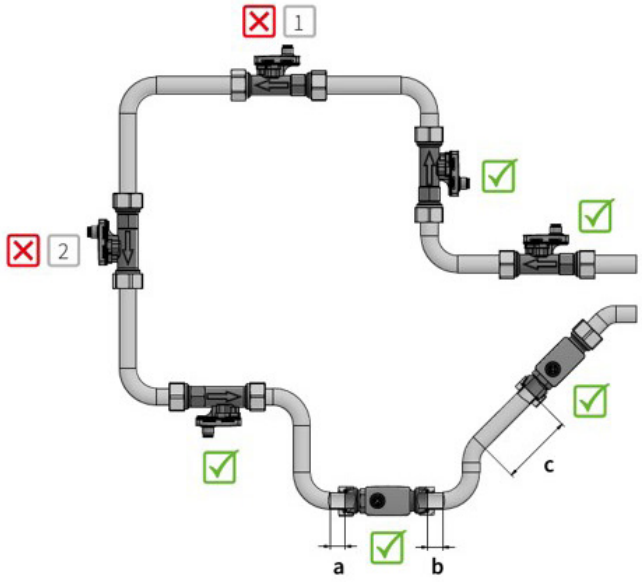
The following instructions mus be observed for correct functioning of the sensor:

- Ensure that the internal diameter of the connection tubes on the sensor is never smaller than the internal diameter of the measuring tube
- Avoid repeated elbows in the same level at entry-side

- Any air bubbles can escape upwards
- Low risk of dirt deposits

- Any air bubbles can accumulate (as highest point of the system)
- Danger of idling (measuring tube only part, filled)

- Possible rising of air bubbles from below
- Danger of idling



The following minimum distrances must be maintained:

≥1. DN for recommended elbow with R1,8.DN ≥1.DN ≥5. DN for alternative elbows

I/O-Link Switch Family

Device features

- Large display
- Freely adjustable
- Rugged metal construction
- Compact size
- Long-term stability
- Dependable
- Immune to interference

This switch is used in control, regulation or monitoring systems where switching signals or analogue signals are used or a display is required.

The switch can replace the following:

- Mechanical switches
- Mechanical displays
  (pressure gauges, thermometers, inspection glass)
- Sensors

All the above mentioned functions can be combined in one device.

All switch devices have a compact and pivoting metal housing so that they can be mounted optimally under adverse installation conditions. The large display can always be perfectly positioned so that it is easy to read even at longer distances.

Both of the switching outputs can be set individually either as NO or NC. They also both have hysteresis and the window functions. Therefore the on and off switching values as well as delay times (attenuation) for each of the switching points can be chosen freely.

Thanks to these easy switching functions, intelligent adjustments can be set which are normally not possible using a mechanical switch. Therefore, many switches can be replaced with one product of the I/O-Link switch family.

The switchs offer good practical characteristics combined with diverse mounting and setting options.

Because of its compact design, long lifespan and high functionality, this controller is ideal for the permanent series use in hydraulic and pneumatic applications.

I/O-Link Switch Family

SCPSDI Pressure Switch

Device features

Display

- Large Display
- 2-color switching status display
- Reversal of viewing direction by 180°
- Beveled for better readability
- Units in bar, MPa and psi

Easy to use

- 3 tactile buttons
- VDMA-Menu navigation

Outputsignal

- IO-Link interface
- Stable metallic M12x1 thread
- Pin assignment according to VDMA
- Can be selected between switching output, current output and voltage output

Measuring element

- Pressure range up to 600 bar possible
- High compressive strength
- High accuracy up to 0,5% FS
- Long-term stable measuring cell

Thread

- G1/4 internal and external thread
- Stainless steel 17-4PH = /1.4542
- Broad media compatibility

Housing

- Metallic housing
- High quality surface
- 240° rotatable
- IP67 protection
- Increased temperature range between -40°C up to +85°C

SCTSDI Modular Temperature Switch

Device features

Display

- Large displays for temperature
- 2-color switching status display
- Reversal of viewing direction by 180°
- Bevelled for better readability
- Units in °C and °F

Easy to use

- 3 tactile buttons
- VDMA-Menu navigation

Outputsignal

- IO-Link interface
- Stable metallic M12x1 thread
- Pin assignment according to VDMA
- With 2 switching outputs and switchable current output between 0..20 and 4..20mA

Housing

- Metallic housing
- High quality surface
- 240° rotatable
- IP67 protection

Measuring element

- M12x1 - 5Pin Connector
- Designed for an external PT1000 input Signal (temperature probe sold separately)
- Measuring range between -50°C and 150°C

Temperature probe

- Installation-space independent: The existing sensor probe can be connected via cable, regardless of location
- Direct connection via M12x1 connector is possible
- Separately available sensor probe: see SCT03

SCTSDI Modular Temperature Switch

Technical data

Ordercode temperature switch	SCTSDI-150-1T-05
Measuring range temperature	-50... 150
Lowest Reset point RSP	-50
Highest Switching Point SP	150
Display resolution	0,1
Min. adjustable difference SP and rSP	1

All units in bar

Process connection	
Process connection	M12x1 internal
Input signal	PT1000

Response speed	
Switching output	≤3 ms
Analogue output	≤3 ms

SCLSDI Level Switch

Device features

Display

- Large Display for level
- 2-color switching status display
- Reversal of viewing direction by 180°
- Beveled for better readability
- Units in mm, cm, m, inch und %

Easy to use

- 3 tactile buttons
- VDMA-Menu navigation

Outputsignal

- IO-Link interface
- Stable metallic M12x1 thread
- Pin assignment according to VDMA
- Can be selected between switching output, current output and voltage output

Housing

- Metallic housing
- High quality surface
- 240° rotatable
- IP67 protection

Installation

- G3/4” external thread
- Stainless Steel 1.4404
- One coupling hole

Float element

- Proven measuring system
- High float dynamics
- Small desgin
- Universal usage

Measuring element

- Measuring range up to 1000mm
- High Pressure rating up to 5bar
- High accuracy up to 0,5% FS
- Long-term stable measuring cell

SCK cable

Device features

- One cable for all
- Compact size
- Interference-free
- Compatible to:
  - Sensors
  - Controllers
- M12 plug
- DIN EN 175301 (Device plug)
- Available in a variety of lengths

The **SensoControl®** cable was designed for use with the industrial sensors and switches.

Thus the M12 cable and M12 plug are

- Compact
- Shielded
- Five-pole

5-pole version

The 5-pole cable is suitable for both 4-pole and 5-pole connections. The sensor variants with a 4-pole connector are fully compatible with the 5-pole cable.

So despite different pin counts on the pressures switch (Controller Family SCxSD and SCOTC) and sensors, it is always possible to use just one cable version (5-pole) regardless of the plug version.

The SCK-400-xxx-x5 cables fit to all components in this catalogue using M12 connectors.

Shielding

Shielding protects against interference and ensures improved operational safety.

- Higher EMC protection

SCA adapter

SCA-1/4 reduction adapter

The SCA-1/4 provides compatibility for earlier sensor versions with the hydraulic connection M22x1.5 or G1/2 BSPP.

- When replacing earlier versions

This allows facilities to be updated without major planning overhead.

SCA-1/4-M22x1.5-ED
SCA-1/4-ED-1/2-ED

** DF = Design Factor (safety factor)

Installation and safety instructions

The CE mark indicates a high-quality device that complies with the European directive 89/336/EWG and EMVG.

We confirm that these products comply with the following standards:

EMC

- Electromagnetic emission: EN 61000-6-3
- Electromagnetic immunity: EN 61000-6-2

Important

- Electromagnetic disturbances can affect the desired signal.
- Apply all general EMC strategies when planning facilities and machines.
- We recommend using shielded cables (SCK-400-xx-x5) in order to achieve better EMC immunity.
- Make sure you route analogue and data cables so that there is a sufficient gap between them.
- An effective earthing strategy will help you to avoid measuring errors.

Always connect metal housings with the reference ground. The PE protective earth should have a low-ohm connection. According to VDE 0701, the PE resistance must be measured.

Power feed voltage

Each sensor series specifies the recommended feed voltage to used when operating the standard sensor. We recommend using a low-noise, high-quality, constant voltage source. Certain specifications (such as sensitivity and thermal sensitivity shift) may change when other power feeds are used. Each sensor is trimmed to its peak performance. The sensor's performance may change when other power feed types are used. Make sure you comply with the polarity and earthing regulations.

Improperly connected feed wires can damage sensors and amplifiers!

If one pole of the sensor feed is automatically earthed via the sensor's processing system, then you should avoid an additional earth on the sensor signal wire. This would cause the sensor to short circuit and damage the sensor.

Do not apply feed-in voltage to the output wires. This will permanently damage the sensors!

The sensor will be damaged if the data sheet specifications and maximum recommended feed voltage levels are exceeded!

Compatibility with media (substances)

SensoControl® products which come into contact with the substance are not produced in an oil-free or fat-free environment.

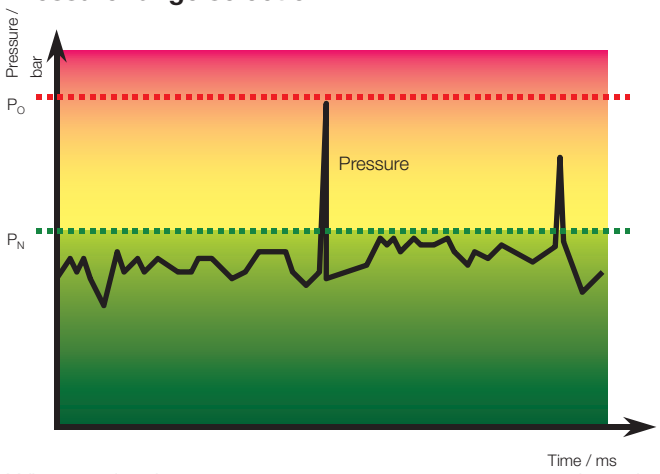
Therefore these products are **not** suitable for use in applications which use explosive mixtures of oil and gas (e.g. oxygen or compression). This could lead to a danger of explosion!

Danger of explosion!

Only use substances which are compatible with the components that come into contact with the substance. (Refer to the data sheets)

Please consult with the plant manufacturer or the manufacturer of the substance if you have any questions. (Refer to catalogue 4100 chapter C).

Pressure range selection



When selecting pressure components, ensure that the overload pressure P_{max} will not be exceeded.

It is possible that the pressure cell can be deformed when the overload pressure P_{max} is exceeded (depending on the duration, frequency and level of the pressure spike).

Note: The "diesel effect" caused by entrapped air can result in pressure spikes that far exceed the maximum pressure.

The nominal pressure P_N of the pressure component (sensor/switch) should be higher than the nominal pressure of the system to be measured.
